SCOPE BOUNDARY STATEMENT

This draft includes **Scope 1** (direct fuel combustion), **Scope 2** (purchased electricity), and **Scope 3** (value chain) emissions.

Scope 3 Categories Included: Cloud Computing/Hosting, Courier & Delivery Services.

Scope 3 Categories Not Assessed: Business Travel, Employee Commuting, Purchased Goods, Capital Goods, Waste Disposal, and other upstream/downstream categories not identifiable from spend data.

Processing Summary: 2803 of 3500 line items were classified into Scope 1, 2, or 3. 697 items were excluded (non-emission or unrecognized categories).

Methodology & Standards

Framework: GHG Protocol Corporate Standard (2015 Revised Edition)

Method: Spend-Based Estimation per Chapter 7, Table 7.1

Emission Factors: EPA EEIO v1.1 (2024 Update)

Classification Engine: Claude AI (claude-sonnet-4-20250514) with keyword fallback

Report Generated: February 19, 2026

Scope 1 includes direct emissions from owned or controlled sources such as natural gas combustion and company vehicle fuel.

Scope 2 includes indirect emissions from purchased electricity, steam, heating, and cooling. **Note:** Electricity emissions use US National Grid Average (0.417 kg CO₂e/kWh equivalent). Regional grid factors may vary.

Currency Handling: Multiple currencies detected (INR, EUR, USD). All non-USD amounts were automatically converted to USD using static FX rates (vintage: February 2026) before emission factor application. Conversion details are shown in the Transaction Ledger below.

Emission Calculation Formula:

$$\text{tCO}_2\text{e} = (\text{Spend in USD}) \times (\text{EEIO Emission Factor}) \div 1000$$

This draft is intended as an initial estimate. For audit-grade reporting, actual activity data (e.g., kWh, liters of fuel) should be used where available.
