Carbon Emissions Inventory

Complete GHG Inventory (Scope 1, 2 & 3)

Reporting Period: FY 2025

Report ID: c0905ed3

Metric	Value
Scope 1 Emissions (Direct)	11633.12 tCO ₂ e
Scope 2 Emissions (Indirect)	7064.96 tCO ₂ e
Scope 3 Emissions (Value Chain)	2741.55 tCO ₂ e
Total Emissions	21439.63 tCO ₂ e
Report Type	Complete Draft (Scope 1, 2 & 3)
Methodology	GHG Protocol — Spend-Based
Report Date	April 16, 2026

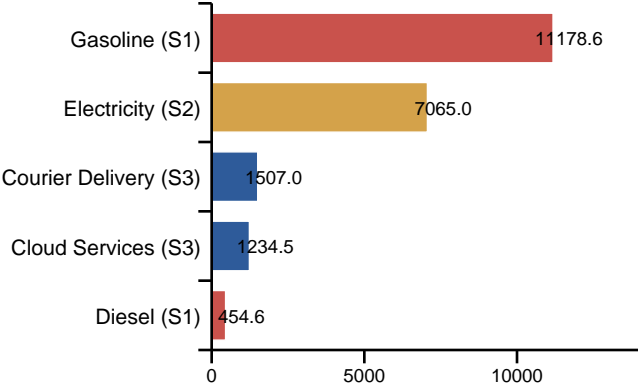

Executive Summary

Your FY 2025 carbon footprint was 21,439.6 tCO₂e across 3 emission scope(s) and 5 spend categories. Scope 1 (direct combustion) is the largest contributor at 54%, driven primarily by Gasoline (11,178.6 tCO₂e).

Emissions by Scope

Top 5 Emission Categories

Emissions Intensity: 1,581 tCO₂e per \$1M classified spend

Lower intensity means less carbon per dollar of activity — useful for year-over-year comparison when revenue or spend changes.

Scope 1 Emissions Breakdown (Direct)

Category	Emissions (tCO2e)
Gasoline	11178.56
Diesel	454.56

Scope 2 Emissions Breakdown (Indirect)

Category	Emissions (tCO2e)
Electricity	7064.96

Scope 3 Emissions Breakdown (Value Chain)

Category	Emissions (tCO2e)
Courier Delivery	1507.01
Cloud Services	1234.54

Spend Data Processed

Category	Scope	GHG Protocol Class	Spend	Factor	tCO2e
Gasoline	Scope 1	Direct Emissions	\$4,383,749	2.5500	11178.56
Diesel	Scope 1	Direct Emissions	\$168,354	2.7000	454.56
Electricity	Scope 2	Indirect Emissions	\$2,738,355	2.5800	7064.96
Courier Delivery	Scope 3	Category 4 - Upstream Transport	\$2,152,874	0.7000	1507.01
Cloud Services	Scope 3	Category 1 - Purchased Goods and Services	\$4,115,140	0.3000	1234.54
TOTAL			\$13,558,473		21439.63

Methodology & Standards

Framework: GHG Protocol Corporate Accounting and Reporting Standard (Revised Edition) + Scope 3 Standard (Corporate Value Chain). Hybrid methodology per §7.3.2 data hierarchy: Tier 2 (activity-based) where customer supplied physical quantities; Tier 3 (spend-based screening) for remaining spend.

Spend-based emission factors: EPA USEEIO v2.2 supply-chain GHG factors at 2022 producer prices (commodity codes mapped to NAICS 6-digit). Factor file version: 2.1-naics-expanded-2026-04-16. Spend-based factors carry an industry-standard uncertainty band of $\pm 25\text{--}40\%$ per GHG Protocol Scope 3 Standard §7.3.2.

Activity-based emission factors (where used): EPA GHG Emission Factors Hub Table C-1 (Mobile Combustion CO₂, 40 CFR Part 98) for liquid fuels; EPA Stationary Combustion factors for natural gas and propane; eGRID 2022 grid intensity for electricity (subregion-specific when state is supplied); IPCC AR5 100-year GWP for refrigerant fugitive emissions. Activity factor file version: 1.0-activity-2026-04-15. Activity-based accuracy: $\pm 5\text{--}10\%$.

Data source mix in this report: 0 of 3265 classified rows used activity factors (0.0%); 3265 used spend-based factors. Activity rows take precedence over spend rows for the same emission category — no double-counting.

Scope 1 includes direct emissions from owned or controlled sources (fuel combustion, refrigerant fugitive emissions). Where activity data is supplied, calculation is direct from physical quantity \times per-unit factor. Where only spend data is supplied, the spend-proxy method is applied — disclosed as such.

Scope 2 includes indirect emissions from purchased electricity. Grid factor used for spend-based calculation: 2.58 kg CO₂e per USD spent (US).

Currency Handling: Multiple currencies detected (USD, INR, CAD, EUR, GBP). All non-USD amounts were automatically converted to USD using static FX rates (vintage: February 2026) before emission factor application. Conversion details are shown in the Transaction Ledger below.

Calculation formulas:

Spend-based: $\text{tCO}_2\text{e} = (\text{Spend in USD}) \times (\text{USEEIO factor in kg/USD}) \div 1000$

Activity-based: $\text{tCO}_2\text{e} = (\text{Quantity in physical units}) \times (\text{per-unit factor in kg/unit}) \div 1000$

Refrigerant fugitive: $\text{tCO}_2\text{e} = (\text{Refrigerant kg}) \times (\text{GWP}) \div 1000$

Classification engine: Claude AI (claude-sonnet-4-20250514) with deterministic keyword fallback per EEIO commodity-code mappings. Vendor name takes precedence over expense_category when both are present (vendor identity is the stronger signal).

Report Generated: April 16, 2026

This draft is intended for screening, supplier-disclosure response (CDP, supplier portals), and management decision support. For formal regulatory filings (SEC, CSRD, California SB 253) or third-party assurance review, supplement with primary activity data across material categories and engage an ISO 14064-3 reviewer.

Sensitivity. Spend-based accounting carries an industry-standard uncertainty band of $\pm 25\text{--}40\%$ per GHG Protocol §7.3.2. Applied to your total, the best-estimate footprint is **21,439.6 tCO₂e**, with a plausible range of **12,863.8 to 30,015.5 tCO₂e** at the conservative $\pm 40\%$ envelope. Substituting activity data (kWh, litres, kg of refrigerant) for spend in high-impact categories tightens this band toward the $\pm 5\text{--}10\%$ activity-based accuracy.

SCOPE BOUNDARY STATEMENT

This draft includes **Scope 1** (direct fuel combustion), **Scope 2** (purchased electricity), and **Scope 3** (value chain) emissions.

Scope 3 Categories Included: Cloud Computing/Hosting, Courier & Delivery Services.

Scope 3 Categories Not Assessed: Business Travel, Employee Commuting, Purchased Goods, Capital Goods, Waste Disposal, and other upstream/downstream categories not identifiable from spend data.

Processing Summary: 3265 of 3500 line items were classified into Scope 1, 2, or 3. 235 items were excluded (non-emission or unrecognized categories).

Credits and Refunds: 105 negative-amount rows (credit memos, returns, billing adjustments) were netted against purchases in the same emission category before applying factors, per GHG Protocol §7.3.2 (economic-value method) and consistent with GAAP/IFRS return accounting.

Data Intake Decisions

Before parsing your file, the engine inspected its structure and auto-detected the following settings. Every decision here is applied to normalize your data to a consistent internal format (UTF-8, US-convention decimals, hyphen-prefix negatives) before emission factors are applied. This preserves the ability to reconcile each line against your general ledger.

Setting	Auto-detected Value
File encoding	UTF-8
Decimal convention	US (1,234.56)
Negative amount format	Hyphen (-1234.56)
Date convention	YYYY-MM-DD (ISO)

Additional notes: Detected date format: YYYY-MM-DD (based on 439 date cells with majority-vote convention)

Row-Level Inference Decisions (Top 20 by Spend)

Full inference log available in the classified_transactions record for deeper audit.

Data Quality Summary

The engine recovered 830 data points that would otherwise have been excluded or left blank: 79 via notes-column inference, 396 via region/notes-based currency detection, 355 via adjacent-row date estimation. Each recovered item is flagged in the Transaction Ledger with its inference source.

86% of your emissions came from high-confidence classifications (vendor or category matched with ≥ 0.8 confidence). The remaining 14% sits in medium- or low-confidence rows — inspect those in the Transaction Ledger if you plan to cite specific numbers.

Top 3 vendors represent 98% of Scope 1 spend (4 distinct vendors total). Reduction effort concentrated on those three accounts has the highest leverage.

Metric	Value
Classification Method	GHG Protocol Spend-Based (Automated)
Emission Factor Source	EPA USEEIO v2.2 supply-chain factors + EPA GHG Emission Factors Hub Table C-1 (for activity-based fuel & electricity) — v2.1-naics-expanded-2026-04-16
High-Confidence Mappings	2947
Items for Review	553
Total Transactions Flagged	486
- Missing Vendor Name	381
- Negative Amounts (Credits)	105

Methodology Note: Industry-standard estimation aligned with GHG Protocol Corporate Standard (2015 Revised Edition). Spend items were classified using automated mapping with keyword and vendor recognition. For higher accuracy, supplement with actual activity data (kWh, liters, km) where available.

Regulatory Framework Guidance

Framework	Data Relevance	Coverage	Notes
SEC Climate Disclosure	Scope 1 & 2 estimates	Partial	Activity data needed for filing
CSRD (EU)	ESRS E1 baseline	Partial	Additional metrics required
CDP Climate	C1-C12 inputs	Estimated	Verify with measured data
GHG Protocol	Spend-based method	Aligned	Standard estimation approach

Note: Emissions estimated using the GHG Protocol Spend-Based Method with EPA EEIO emission factors. For enhanced precision, supplement with actual activity data (kWh, liters, km). Consult your sustainability advisor before regulatory submission.
